## **Ohio's Energy Future Tour Announces Third Stop**

**Collaboration among businesses, trade associations, nonprofits and local governments  
will hold third forum in Dayton**

Columbus, OH – Today, Ohio's Energy Future Tour announced the third stop on its tour for Dayton on Monday, March 16 from 5:30 pm-8:00 pm at the University of Dayton Sears Recital Hall in the Jesse Phillips Humanities Center.

“To date, we’ve heard from dozens of experts and community leaders in Northeast and Central Ohio about opportunities for a clean energy economy, regional trends, and actions necessary to position the state as a leader,” commented Jane Harf, Spokesperson for the Tour. “Now, the tour continues with our third stop in Dayton – to interact with local community and business leaders, policymakers, and residents to learn more about the regional strengths.”

The Dayton forum will provide an opportunity for energy experts, community leaders and the general public to offer their insights on the positive impacts renewable energy, energy efficiency and other technologies are having in their local communities.

The statewide tour is organized by a collaboration of businesses, trade associations, nonprofits and local governments and is intended to spark a dialogue with stakeholders in an effort to help develop a new energy vision for Ohio. Future forums are planned for Toledo, Cincinnati, and Athens. The forums are intended to help provide a path forward for developing an energy vision that returns Ohio to a position of national leadership. Upon completion of the tour, a compilation of ideas and recommendations will be compiled for use by policymakers.

Those interested in attending the Dayton event should register online at [www.ohioenergyfuturetour.com](http://www.ohioenergyfuturetour.com).
